

# *Re-Engineering Billing and Collections in an Oracle / Object-Oriented World*

**- Oracle Applications User Group Conference -**

**Orlando, Florida  
April 1996**

Gregory T. Robleski  
Director, Program Mgmt - Billing  
*Bell Atlantic Network Services, Inc.*

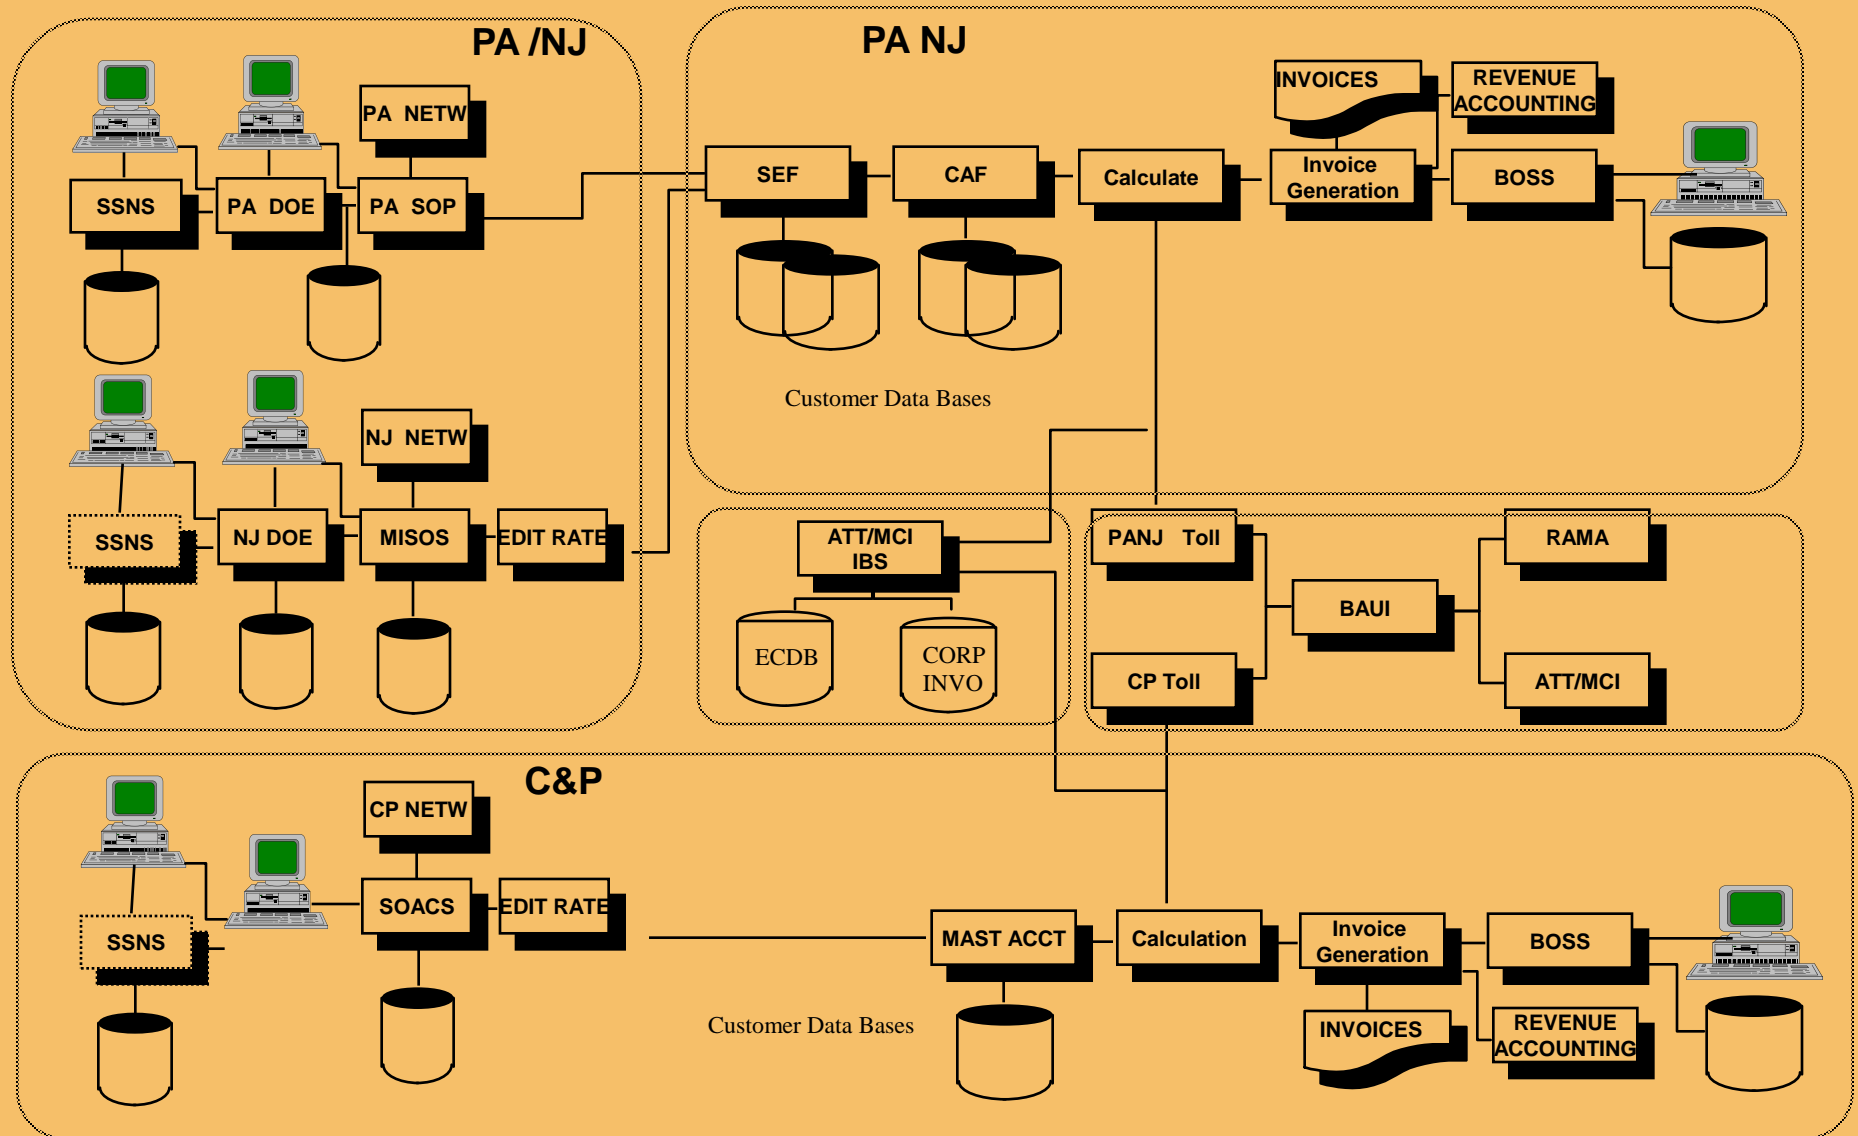

- o The Management and Systems Challenge
- o Application Development Using an Object Approach
- o Overcoming Resistance to the Object World
- o Checkpoint and Lessons Learned

# *The Management and Systems Challenge: The Factors*

- o ***Bell Atlantic*** is one of the seven Regional Bell Operating Companies (*RBOC*'s).
  - Serves 7 states (DC, DE, MD, NJ, PA, VA and WV)
  - 14 million customers
  - \$15 billion in revenue
  - 75,000 employees
- o But ***Bell Atlantic*** is not one company.
- o ***Bell Atlantic*** is a RBOC.

**How to Effect and Control Massive Business Process and Information Systems Change.**

# Bell Atlantic Current Billing / Customer Contact High-Level Flows

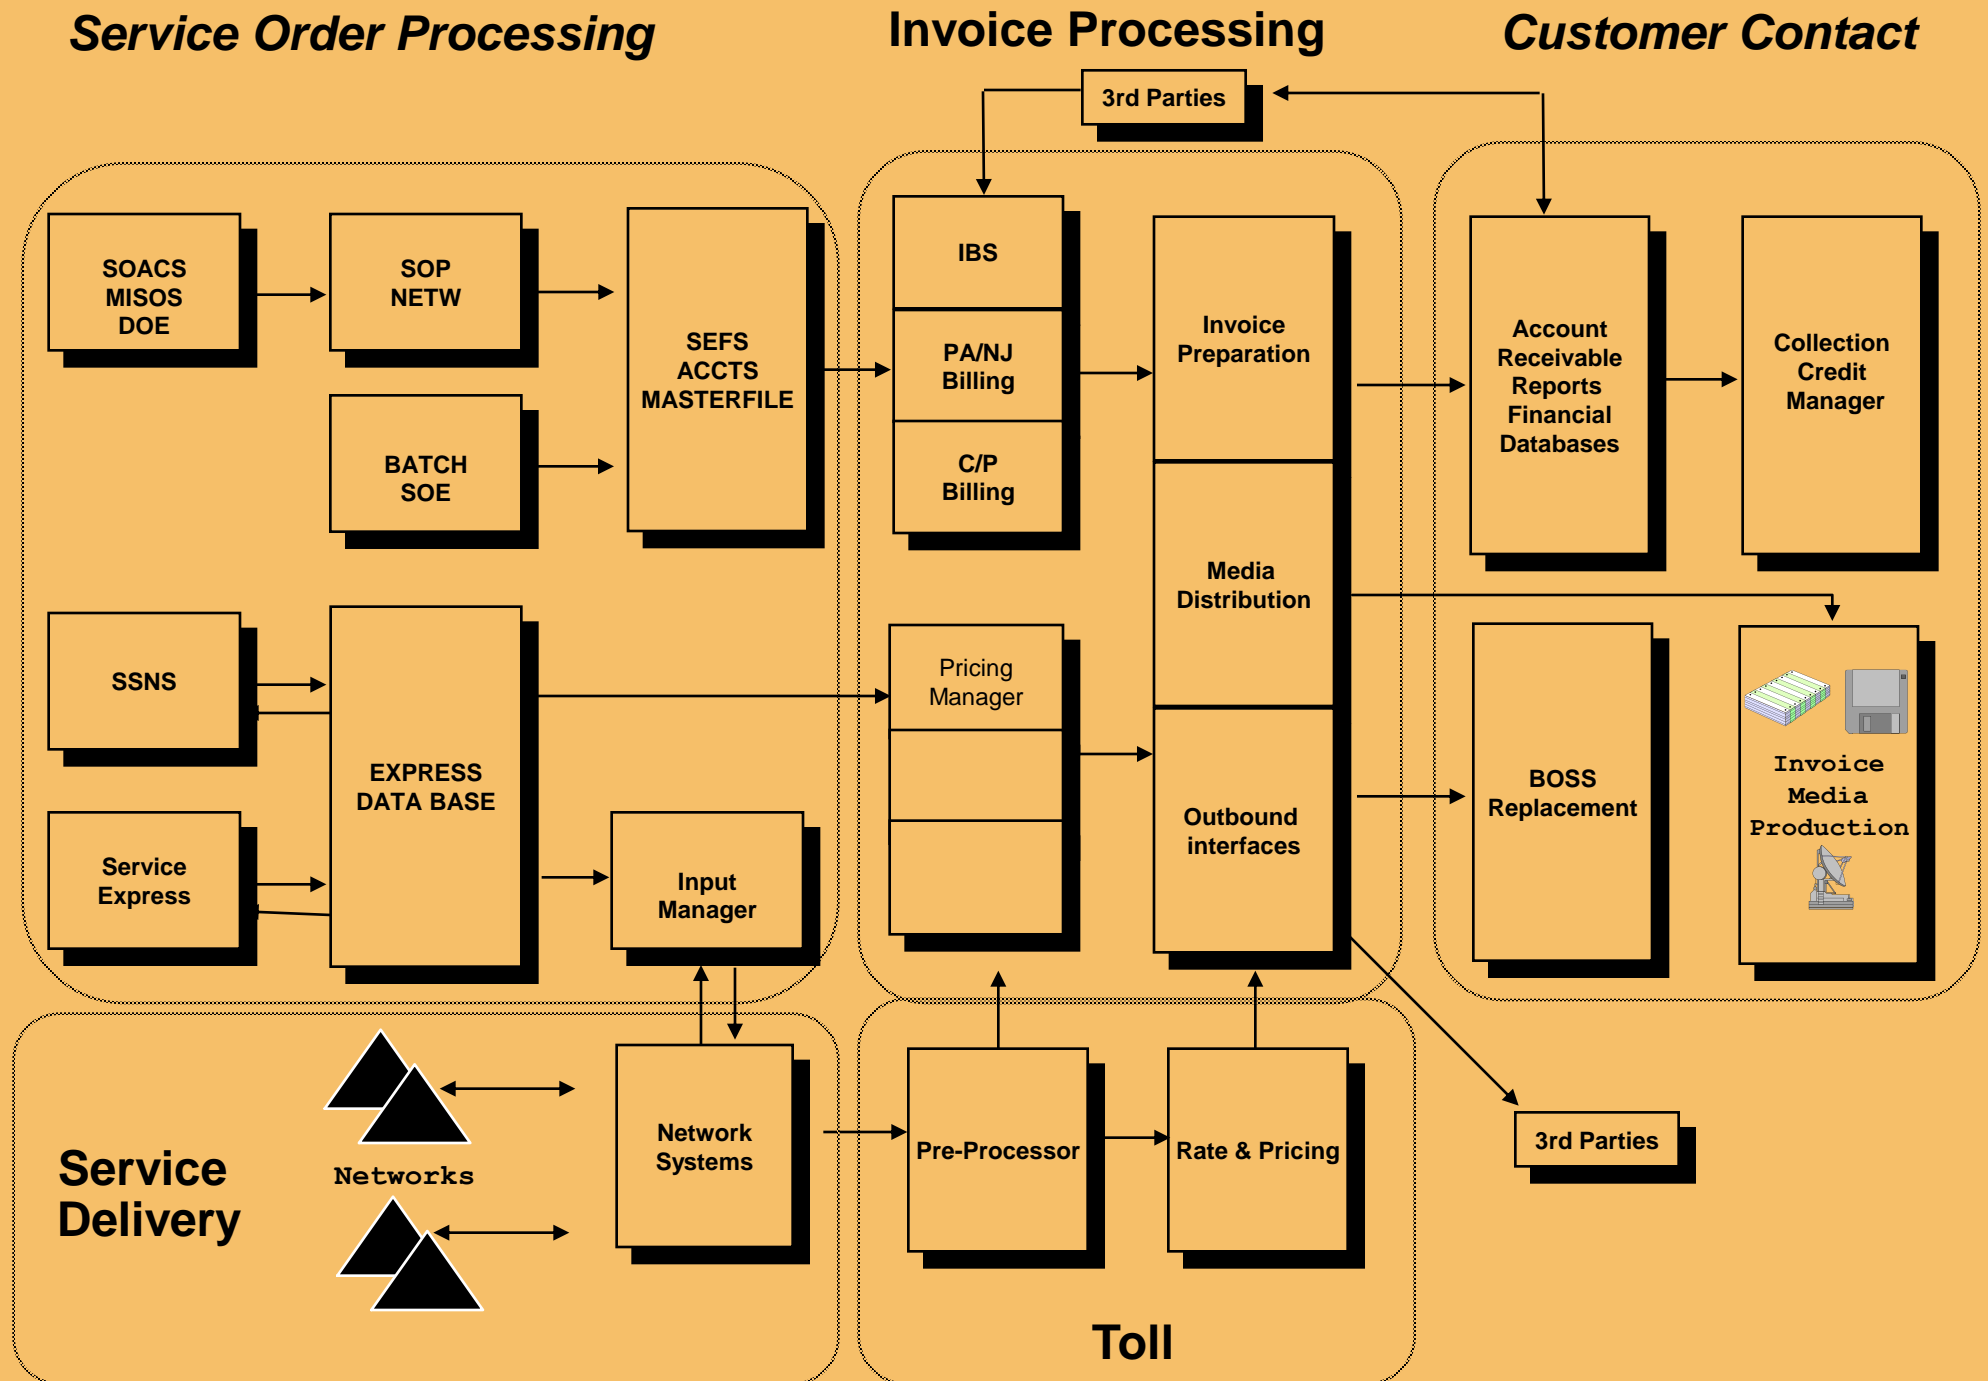

# *The Management and Systems Challenge: The Objective*

- o One regional-oriented company:
  - One workforce;
  - One management infrastructure.
  
- o Obliterate the legacy systems (information, management, personnel etc.) and mindset.
  
- o Turn the battleship in four years, or less!

**The Demands of the Marketplace Must Drive the Technology and the Business Processes!**

# Bell Atlantic New Billing / Customer Contact Architecture

# ***The Management and Systems Challenge: The Solution***

---

- o For many industries / organizations, change has become a way of life.
- o For many industries / organizations, technology has become the business.
- o The pace of business and technology change is quickly becoming the responsibility of the CEO and Board.
- o Only organizations which merge a business perspective with a technology culture can successfully manage massive, technology-powered change.

**The Promise of Object-Oriented Analysis, Design & Development!**

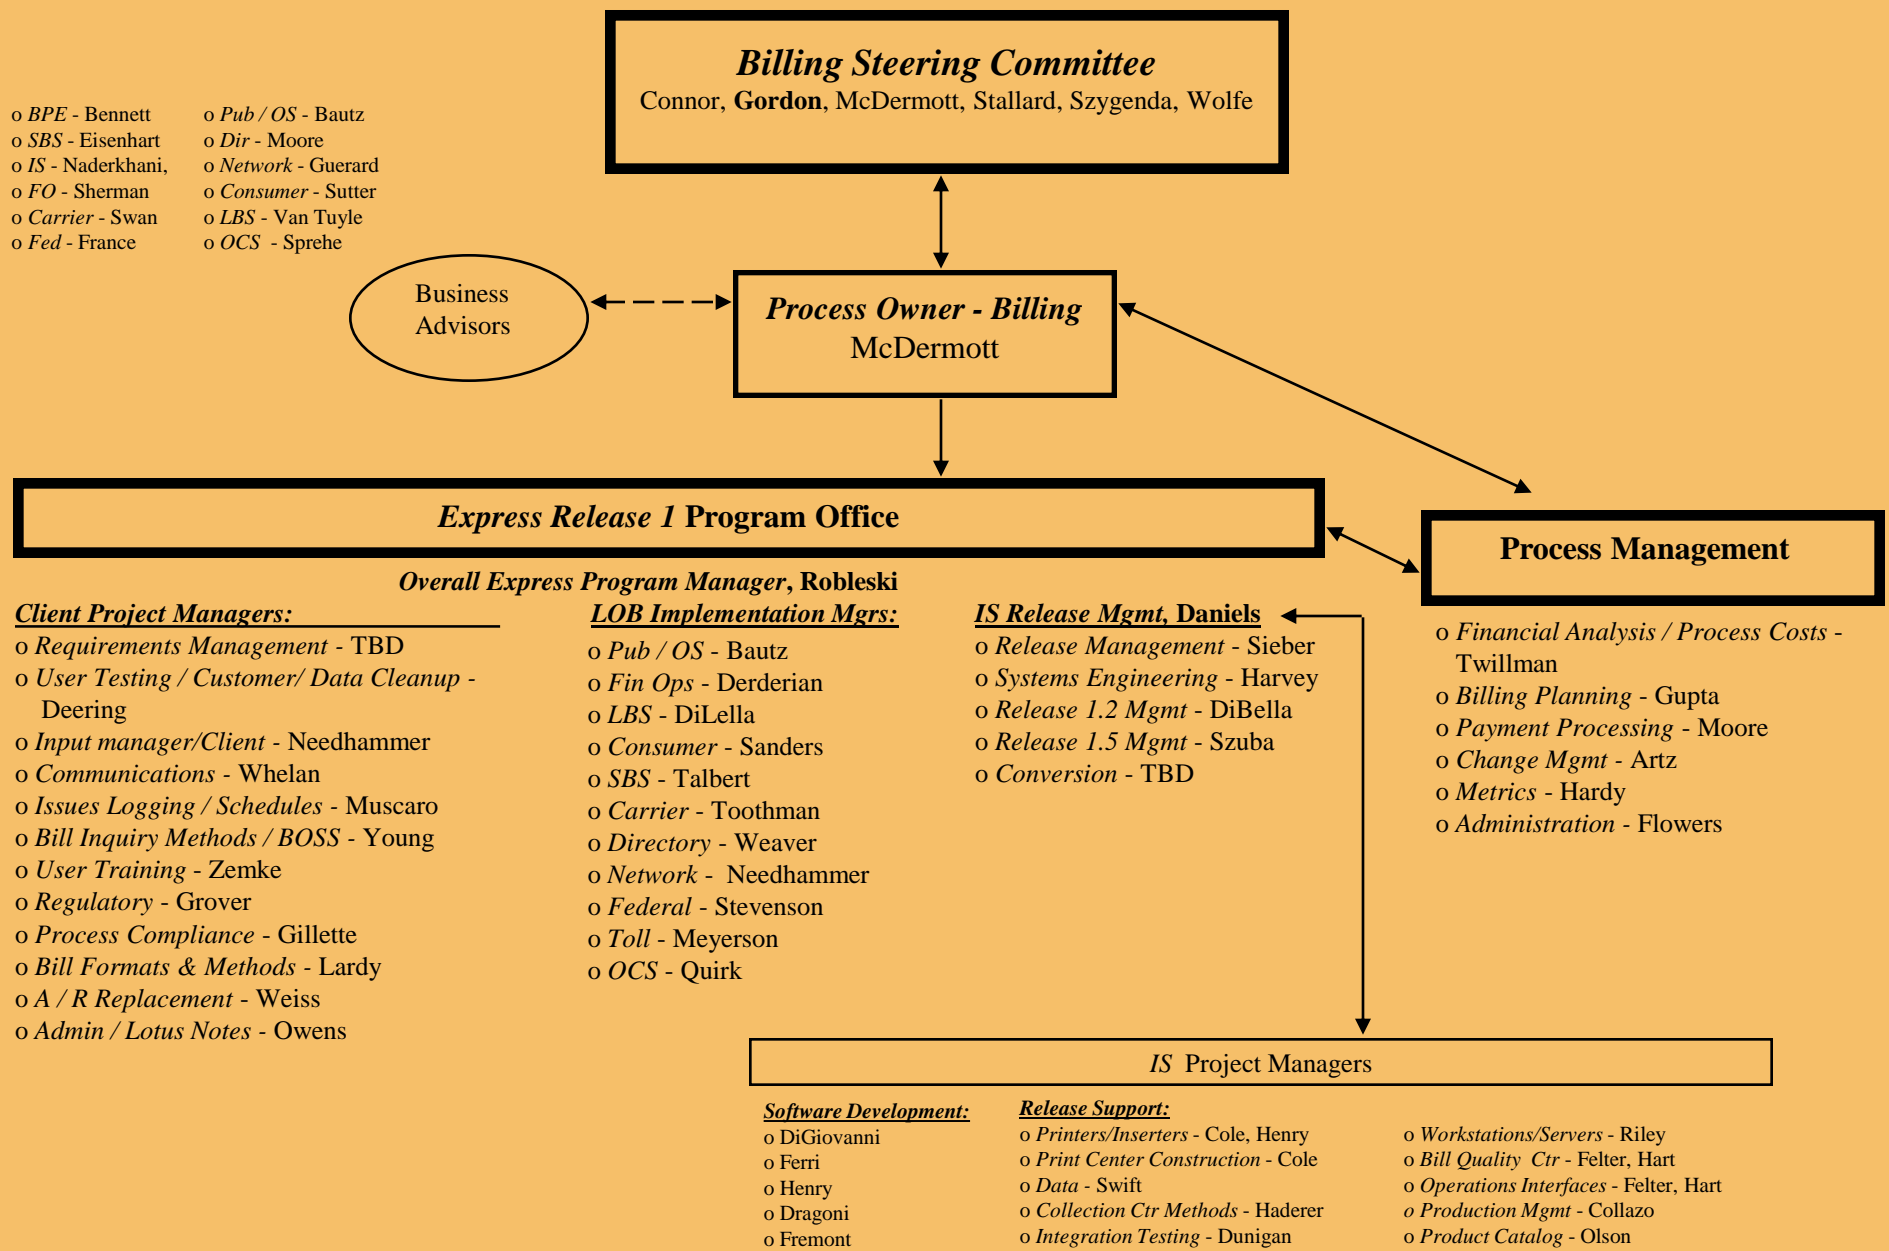

# *Application Development Using an Object Approach*

---

- o The demands of the marketplace required an aggressive solution.
- o But little experience with Objects.
- o A somewhat different paradigm is needed:
  - Central oversight and issue management.
  - Project status reporting and metrics.
  - Top-to-bottom client involvement.
  - External constituencies.
  - Bifurcating of the IS Organization.

**The Program Office Is the Mechanism to Manage Development and Change!**

# Office Structure / Organization

# *Overcoming Resistance*

---

- o Nothing is easy!
- o Not a replacement for understanding the business and the clients.
- o Not a solution to all problems.
- o Most resistance is found in the technology organization(s)!
- o Selection of Legacy to Object migration path is critical.
- o Inability to monitor development and project status.

**Be Prepared! The Road to Objects Is Bumpy!**

- o *expressTrak* has been a success!
  - New invoice introduced.
  - Cost savings beginning to be realized.
  - EDI and INTERNET payment trials proceeding.
  - Staff being re-deployed.
  
- o Objects do offer advantages:
  - Productivity gains.
  - Easy to explain to clients / business people.

- o Objects cause management problems:
  - Time lines are iterative and meaningless.
  - Staffing / Hiring costs skyrocket.
  - Project estimation and management become significantly harder.
  - Impossible to pursue without a heavy client commitment / involvement (i.e., The Program Office).

**The Object Wave is Coming!**

**You Can Either Ride It, or Be Swept Away!**
